THERAPEUTIC RATIONALE

KOFOL immunity tablets reduces pathogen virulence and strengthens host immunity. *Tinospora cordifolia* controls bacterial infections by inhibiting quorum sensing activity of pathogens. *Curcuma longa* control infections by preventing bacterial adhesion to host tissue by inhibiting the biofilm formation of pathogens.

KOFOL immunity tablets improves cellular as well as humoral immunity. *Curcuma longa* and *Tinospora cordifolia* improve the immunity by increasing polymorphonuclear cells as well as by enhancing immunoglobulin synthesis. *Triphala Guggul*, *Plumbago zeylanica* and *Rubia cordifolia* possess anti-bacterial, anti-inflammatory and wound healing properties. *Piper longum* is immunomodulator, bioavailability enhancer, respiratory tonic, enhances host resistance and helps in recovery from intestinal infections.

Thus, KOFOL immunity tablets complements the action of antibiotics and helps achieve faster recovery from various infections.

INDICATIONS

Prophylactic:

- Immunity builder
- Long-term oral steroid therapy
- Seasonal outbreaks of infective diseases e.g. Influenza, Typhoid or Malaria

Therapeutic:

- As a complement for antimicrobial therapy, particularly respiratory tract infections and skin and soft tissue infections.
