THERAPEUTIC RATIONALE

MINISCAR cream is effective in reducing scarring and scar tissues. MINISCAR cream also prevents and minimizes pregnancy stretch marks.

Aloe barbadensis accelerates the process of scar healing by enhancing the collagen turnover in the scar tissue. It also improves the microcirculation and promotes healing. *Acacia arabica* acts as an astringent and inhibits fibroblast proliferation. *Bergenia ligulata* is anti-bacterial and protects connective tissue proteins. *Hemidesmus indicus* and *Terminalia chebula* have anti-oxidant, immune modulating and anti-inflammatory activity.

INDICATIONS

- Scars resulting due to burns, injuries, acne etc.
- Stretch marks due to striae gravidarum, weight gain.

USAGE

To be applied on the affected area twice / thrice a day after mild cleansing
