THERAPEUTIC RATIONALE

TAKZEMA ointment are the non-steroidal remedy for eczema.

Melia azadirachta and *Tinospora cordifolia* modulate immune and inflammatory response by regulation of leukocytes function and reduction of cytokines. *Curcuma longa* protects the normal keratinocytes and thereby strengthens the epidermal barrier function.It also reduces itching and inflammation. *Rubia cordifolia* suppresses the proinflammatory cytokines. *Berberis aristata* helps in wound healing and also exhibits antimicrobial activity to prevent secondary infections. *Emblica officinalis* is a potent antioxidant, which protects dermal tissues from damaging effects of free radicals.

INDICATIONS

- Eczema (Atopic dermatitis)
- Contact dermatitis
